## Harvest and Maturing

After selective hand harvesting, the grapes are destemmed and gently crushed. A short maceration period of a few hours is followed by a slow and gentle pressing. The resulting fresh must is naturally clarified through sedimentation. Fermentation takes place with natural yeasts in both large and small oak barrels. After alcoholic fermentation, malolactic fermentation follows, along with maturation on the full lees until spring (March). In spring, the young wine is clarified/filtered and prepared for bottling.
